According to research by Trend Micro, 91% of targeted attacks are carried into networks via spear-phishing email. Most cybersecurity solutions are designed to combat identifiable threats. But what happens when unidentifiable threats—such as zero-day exploits or undisclosed exploits — attempt to attack your organization?

Employees who open innocent-looking attachments unknowingly risk letting in undisclosed exploits that can spread malware throughout your network. Weeks and months may go by before you discover that your organization's security has been compromised.

100% PROTECTION FROM DOCUMENTS EXPLOITS

**Votiro's Advanced
Content
Disarm &
Reconstruction
Technology**

Votiro patented Advanced Content Disarm and Reconstruction (CDR) technology is a proactive, signature-less technology that targets the file formats that are most commonly exploited via spear phishing, other advanced persistent threats, and cyber attacks. Even security analysts firms, including Gartner, states that more and more organizations will need to add CDR technology to their cyber security protection to assist organization with today's ever rising sandbox evasion techniques.
